

Editor-in-Chief: James A. Stone

Co-Editors: Heather Arthur and Neville Suskin

“A comprehensive, evidence-based resource available for cardiovascular chronic disease care, written for clinical, program, educational, and research settings.”

Released: October 24, 2009

16 Chapters; 500+ Pages

The literature reviews and evidence-informed Guidelines presented include the areas of basic science, epidemiology, prevention, diagnosis, special populations, directions for future research, treatment, and management of people with cardiovascular disease, as well as CR service delivery and administration including information management. This comprehensive document not only summarizes the best evidence but provides an applied perspective for courses.

MUST HAVE REFERENCE FOR PROFESSORS AND STUDENTS!

- Great resource for an inter-disciplinary course on cardiac rehabilitation – from basic science to health services and population health perspectives.
- Excellent textbook for health sciences, epidemiology, kinesiology, nursing, medicine, psychology, rehabilitation sciences, public health, and health policy and administration courses.
- Offers comprehensive and current narrative synthesis of CR and CDM research and its application.
- Video summaries of each chapter available in web version to support lecture delivery.
- Web version updated as science dictates; free of charge.
- Chapter specific web education sessions offered separately.
